

Drawing with Code

For Students

Hi There! Did you know you can use code to make drawings that grow like trees or draw with your nose? *Drawing with Code* is about learning how to be creative with computer programming. Here are some resources to get started:

- All examples you see today are available to download and play with at: github.com/crecord/Drawing-With-Code-Station---Ellis-Fine-Arts-Festival
- Teach your self how to code! I promise you won't regret it. Check out scratch.mit.edu processing.org, or hummingbirdkit.com to get started.
- Feel free to email me at info@carolinerecord.com for advice on how to get started with creative coding. I do private lessons and workshops!
